CATALOGUE 2023

Connecting Brands With People

We work with our supply chain to adapt to shifting business and consumer requirements. Our capacity is now more flexible than ever with scalable Far East production supported by an expanding range of UK Stocked and Manufactured products.

We start 2023 by celebrating new partnerships with two new brands. The first is the iconic Rubik's brand (made in recycled ABS plastic). The second is eco-eco, a UK supplier of environmentally-friendly recycled stationery.

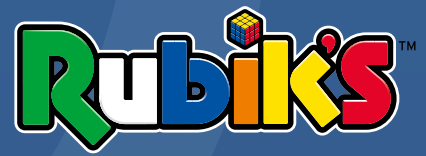

Continuing the eco theme, we use UPS Carbon Neutral services for air freight and for local deliveries. We offer the option of sea freight to minimise emissions (and to save our customers money).

We offer sustainable packaging options, are reducing waste across our business and continue to add eco-friendly options to our product range.

In addition to focussing on environmental concerns, our business is based on delivering our customers' promises on every order, from large to small.

Our UK and Hong Kong team of experienced merchandisers and logistics personnel ensure that our orders are supplied on time and to specification.

Whether your customer is a local community group or business, a start-up or an established blue chip corporation, we are equipped and ready to receive your order and manage it through every process, from conception to final delivery.

1.5 EXPRESS UK STOCK

We are excited to be partnering with eco-eco, a company who supply stationery products with high eco credentials. "eco-eco aims to lead the way in making environmentally friendly stationery products the 'norm' and not the 'exception'."

Here's why we're planet friendly:

The eco-eco promise

Many companies promote their "green" credentials when in reality only a small percentage of their product line is actually made from sustainable materials. eco-eco's whole range is kind to the environment.

What inspires us

When all the news seems to be talking about doom & gloom & how the environment is being harmed, we like to focus on the good that is happening out there. It's not all bad, & we've actually made great inroads into protecting the earth.
